## PROTEIN FEATURE EXTRACTOR REPORT

### 1.1 Introduction

Under construction.

## DATA HANDLER

### 2.1 Data Handler Class

**class** **DataHandler** (*filename: str*)

I'm used to read csv data in.

**Parameters** **filename** (*str*) – The filename, including the path to read from, used to pull desired data.

**\_\_slots\_\_** = ['\_\_data']

Reserve space for writable attributes and limits addition attribute creation.

**\_\_init\_\_** (*filename: str*) → None

Constructor Method.

### 2.2 Data Handler Properties

**data** = <property object>

I'm used to access the data that was read in.

**Returns** Dataframe

**Return type** pandas.DataFrame

### 2.3 Data Handler Module Global Variables

**logger** = <CustomLogger.CustomLogger object>

Local logger

## PROTEIN DATA HANDLER

### 3.1 Protein Data Handler Class

**class ProteinDataHandler** (*filename: str*)  
I'm used to read in csv data pertaining to protein data.  
Inherits from *Data Handler*

### 3.2 Protein Data Handler Public Methods

**convert\_to\_count\_vector** (*attributes\_values: numpy.ndarray*) → *Handlers.Processor.Processor*  
I convert all sequences to a count vector based on attributes given.  
**Parameters** **attributes\_values** (*numpy.ndarray*) – List of attributes to use to convert file to.  
**Returns** A processor object containing processed data.  
**Return type** *Processor.Processor*

### 3.3 Protein Data Handler Module Global Variables

**logger** = *<CustomLogger.CustomLogger object>*  
Local logger

### 3.4 Protein Data Handler Module Global Functions

**count\_sequence** (*sequence: str*) → dict  
I count the number of times a character is seen in a sequence.  
**Parameters** **sequence** (*str*) – Protein sequence.  
**Returns** Dictionary with the keys being a character found in the given sequence and the value being the number of time it was seen.  
**Return type** dict

## PROTEIN ATTRIBUTE DATA HANDLER

### 4.1 Protein Attribute Data Handler Class

**class ProteinAttributeDataHandler** (*filename: str*)  
I'm used to read in csv data pertaining to protein attribute data.  
Inherits from *Data Handler*.

### 4.2 Protein Attribute Data Handler Public Methods

**get\_attribute\_headers** () → numpy.ndarray  
I get the attribute headers from the given data.

**Returns** An array of attributes.

**Return type** numpy.ndarry

**get\_attribute\_values** (*value: int*) → tuple  
I get the attribute name and list of associated values associated with the given value - 1.

**Parameters** **value** (*int*) – Row number associated with desired attribute.

**Returns** Attribute name and attributes

**Return type** tuple

### 4.3 Protein Attribute Data Handler Module Global Variables

**logger** = <CustomLogger.CustomLogger object>  
Local logger

## PROCESSOR

### 5.1 Processor Class

**class Processor** (*file: pandas.core.frame.DataFrame*)

I'm used to process a given dataframe.

**Parameters** **file** (*pandas.DataFrame*) – Dataframe to work on.

**\_\_slots\_\_** = ['\_\_data']

Reserve space for writable attributes and limits addition attribute creation.

**\_\_init\_\_** (*file: pandas.core.frame.DataFrame*) → None

Constructor Method.

### 5.2 Processor Properties

**data** = <property object>

I'm used to access the data that was read in.

**Returns** Dataframe

**Return type** pandas.DataFrame

### 5.3 Processor Public Methods

**apply\_attribute** (*attribute\_name: str, attribute: pandas.core.series.Series*) → None

I apply a given attribute series to the data currently held, sum the result, and adds it as a new column to the data.

**Parameters**

- **attribute\_name** (*str*) – Name of the attribute being applied.
- **attribute** (*pandas.Series*) – Series of attribute to be applied.

**Returns** Nothing

**Return type** NoneType

**normalize\_via\_length** () → None

I normalize the data held by dividing each attribute by the length of the sequence.

**Returns** Nothing

**Return type** NoneType

**save\_processed\_data** (*path: str*) → None

I save the data to a given path name.

**Parameters** **path** (*str*) – The path name to save the data held.

**Returns** Nothing

**Return type** NoneType

## 5.4 Processor Private Methods

**\_\_get\_attribute\_header** () → numpy.ndarray

I get the header from the held data associated with the attributes.

**Returns** Nothing

**Return type** numpy.ndarray

## 5.5 Processor Module Global Variables

**any\_uint**

Typing that's a union of all the unsigned integers

alias of Union[numpy.uint8, numpy.uint16, numpy.uint32, numpy.uint64]

**logger** = <CustomLogger.CustomLogger object>

Local logger

## CUSTOM LOGGER

### 6.1 Custom Logger Class

**class CustomLogger** (*filename: str, level: numpy.uint8 = 4*)

I am used to log information to specific files associated with the module that called me.

**Parameters**

- **filename** (*str*) – The name of the module or file used for this logger.
- **level** (*numpy.uint8*) – The level of logging wanted

---

**Note:**

- 0: NOTSET - Doesn't log anything.
  - 1: CRITICAL - logs only critical log calls.
  - 2: ERROR - logs error log calls and everything before it.
  - 3: INFO - logs info log calls and everything before it.
  - 4: DEBUG - logs debug log calls and everything before it.
- 

**\_\_slots\_\_** = ['\_\_level', '\_\_logger']

Reserve space for writable attributes and limits addition attribute creation.

**\_\_init\_\_** (*filename: str, level: numpy.uint8 = 4*) → None

Constructor Method.

### 6.2 Custom Logger Properties

**level** = <property object>

I'm used to access the current logging level.

**Returns** Unsigned 8 bit Integer.

**Return type** numpy.uint8

**logger** = <property object>

I'm used to access the logger object.

**Returns** Logger object.

**Return type** logging.Logger

## 6.3 Custom Logger Methods

**flow** (*message: str*) → None

I'm used to capture the flow of your application. Eg. 'Starting connection'.

**Parameters** **message** (*str*) – The string wanting to be logged.

**Returns** Nothing

**Return type** NoneType

**sanity\_check** (*message: str*) → None

I'm used to capture debugging information from your application. Eg. the current value of a specific variable at a specific point in the application state.

**Parameters** **message** (*str*) – The string wanting to be logged.

**Returns** Nothing

**Return type** NoneType

## INDICES AND TABLES

- `genindex`
- `modindex`
- `search`

## Symbols

`__get_attribute_header()` (in module *Handlers.Processor.Processor*), 10

`__init__()` (in module *CustomLogger.CustomLogger*), 11

`__init__()` (in module *Handlers.DataHandler.DataHandler*), 3

`__init__()` (in module *Handlers.Processor.Processor*), 9

`__slots__` (in module *CustomLogger.CustomLogger*), 11

`__slots__` (in module *Handlers.DataHandler.DataHandler*), 3

`__slots__` (in module *Handlers.Processor.Processor*), 9

## A

`any_uint` (in module *Handlers.Processor*), 10

`apply_attribute()` (in module *Handlers.Processor.Processor*), 9

## C

`count_sequence()` (in module *Handlers.ProteinDataHandler*), 5

`covert_to_count_vector()` (in module *Handlers.ProteinDataHandler.ProteinDataHandler*), 5

*CustomLogger* (class in *CustomLogger*), 11

## D

`data` (in module *Handlers.DataHandler.DataHandler*), 3

`data` (in module *Handlers.Processor.Processor*), 9

*DataHandler* (class in *Handlers.DataHandler*), 3

## F

`flow()` (in module *CustomLogger.CustomLogger*), 12

## G

`get_attribute_headers()` (in module *Handlers.ProteinAttributeDataHandler.ProteinAttributeDataHandler*), 7

`get_attribute_values()` (in module *Handlers.ProteinAttributeDataHandler.ProteinAttributeDataHandler*), 7

## L

`level` (in module *CustomLogger.CustomLogger*), 11

`logger` (in module *CustomLogger.CustomLogger*), 11

`logger` (in module *Handlers.DataHandler*), 3

`logger` (in module *Handlers.Processor*), 10

`logger` (in module *Handlers.ProteinAttributeDataHandler*), 7

`logger` (in module *Handlers.ProteinDataHandler*), 5

## N

`normalize_via_length()` (in module *Handlers.Processor.Processor*), 9

## P

*Processor* (class in *Handlers.Processor*), 9

*ProteinAttributeDataHandler* (class in *Handlers.ProteinAttributeDataHandler*), 7

*ProteinDataHandler* (class in *Handlers.ProteinDataHandler*), 5

## S

`sanity_check()` (in module *CustomLogger.CustomLogger*), 12

`save_processed_data()` (in module *Handlers.Processor.Processor*), 9
